

Electronic Engineer [Part-time Role]

Canaria is developing cutting-edge technology to make everyone on and off Earth that little bit healthier. Canaria leverages the latest IoT technology to provide real time, continuous healthcare monitoring and safety-critical alert systems to some of the harshest environments in the universe. Our solutions have won recognition from NASA and have been previously featured at events such as CES 2017.

What you'll do:

- Contribute exceptional engineering skills to a fast-paced development program
- Test and evaluate design options to help optimise final product specs
- Collaborate and communicate with the rest of Canaria to ensure our products are all epic and unmatched in fulfilling our customer needs

Skills we're excited about:

- Previous hands-on project experience
- Experience using Autodesk Eagle and Autodesk Fusion
- Expertise in circuit design and embedded programming

Perks:

- Opportunity to have hardware that you've made be used in some of the harshest environments that exist—including space!
- Competitive salary
- Full access to employee bonus and equity schemes
- Flexible working hours
